ALL SUBDIVISIONS

- 1. Speed Restrictions—** Maximum Speeds Permitted
- Passenger trains See Subdivision Special Instructions
- Freight trains 60 MPH.
- Loaded unit coal trains 50 MPH.
- Empty unit coal trains 50 MPH.
- Trains designated to operate as Train Nos. 1, 2, and 61, when consisting of 40 cars or less, PROVIDING 110 p.s.i. brake pipe pressure is carried, MAY be operated at passenger train speeds on subdivisions where passenger train speeds are shown, but not exceeding maximum speed of 65 MPH, except not exceeding maximum speed of 60 MPH when all cars are not equipped with roller bearings. Notification will be made to train crews and dispatcher when trains are so operated.
- The above speeds are subject to modification under speed restrictions indicated under each subdivision special instructions.
- All trains and engines through turnouts and gantlets except as specified in special instructions or where fixed signals indicate otherwise 12 MPH.
- Engines running light or with caboose only 50 MPH unless otherwise provided.

Equipment	Main Line	Branch Line
Ore cars	45 MPH.	20 MPH.
Scale test cars	35 MPH.	20 MPH.
Air dump cars (loaded)	35 MPH.	20 MPH.
Derricks	30 MPH.	15 MPH.
Cranes	30 MPH.	15 MPH.
Pile drivers	30 MPH.	15 MPH.
Clamshells and shovels	30 MPH.	15 MPH.
Jordan spreaders	30 MPH.	15 MPH.
Wedge plows and dozers (dead in tow)	35 MPH.	20 MPH.
Rotary plows	30 MPH.	20 MPH.

Maximum Speed Diesel Units Dead in Tow—

Switcher units 50 MPH.

Road switchers and other units 65 MPH.

Diesel engines, wrecking cranes and other types of heavy work equipment must not be operated on subdivisions on which they have not been previously operated until it is positively known that such movement can be made safely as authorized by chief dispatcher.

- 2. Movement of Diesel Units—**
- Diesel units not equipped with alignment control couplers when dead in tow in freight trains must be handled singly, not in groups and not less than 5 cars or more than 15 cars from the road engine.
- When a locomotive consist of more than 3 units in service includes diesel unit or units not equipped with alignment control couplers, only the three rear units will be allowed to work power when the train is to make a back-up movement. Other units must be isolated.
- BN diesel units not equipped with alignment control coupler:
- All Switcher Units
- Road and Road Switcher Diesel Units
- 600- 995 inclusive
- 1556-1623 inclusive
- 1955-1974 inclusive
- 4000-4197 inclusive
- 6000-6255 inclusive
- 9707-9794 inclusive
- 9900-9976 inclusive

FW&D and C&S diesel units not equipped with alignment control coupler:

FW&D 605-610 inclusive

FW&D 850-859 inclusive

C&S 150-842 inclusive

The following units, not equipped with alignment control couplers, are equipped with bolster stops (see Item 5A, All Subdivisions):

626, 668-702, 720-732, 735, 738-744, 752-758, 767-770, 774-785, 788, 790, 796, 800-819, 824, 825, 827-829, 831-840, 843, 849-853, 989.

1556-1563, 1569-1571, 1573, 1576, 1578, 1580-1584, 1587, 1592, 1593, 1595-1597, 1599, 1610, 1613-1615, 1617, 1620-1622, 1955-1965, 1967, 1971.

9707-9794.

No C&S or FW&D units not equipped with alignment control coupler have bolster stops.

- 3. Number of Units to be Used on a Train and Handling of Units Dead in Tow—**
- At no time can more than seven high-horsepower units be coupled together as one consist (high-horsepower units include those with 3,000 horsepower or over).
- On units with less than 3,000 horsepower, the number of units in any one consist will not exceed eight.
- In the event diesel units in excess of the above restrictions are to be handled dead in train, such units must be placed at least five cars, but not further than 15 cars, behind the lead units.
- The speed restrictions for freight and road switcher units must be observed to avoid damage to traction motors.
- 4. Restrictions on Placing Cars in Trains—**
- Following equipment, loaded or empty, must be on rear of trains, except in work trains or when otherwise provided by authority of chief dispatcher:
- Outfit cars
- Tie flats (GNX 4410, GNX 4800 to 4971)
- Log flats (NP 117201 to 117871, BN 633504 to 633523)
- Air dump cars
- Scale test cars (next ahead of caboose)
- Wrecking derricks
- Pile drivers
- Locomotive cranes
- Rotary snow plows, wedge plows, dozers
- Jordan spreaders
- Rear end only cars
- FW&D tank cars in 15000 series to be handled toward rear of train.
- Handling 80-Foot or Longer Cars—**
- During either throttling, or braking, trailing tonnage may cause lateral force sufficient for derailment, where cars 80 feet or longer are coupled to cars 50 feet or shorter, when grade and curvature exceed certain limitations. To avoid creating such conditions, trains of 8,000 or greater trailing tons must handle empty cars 80 feet or longer in the rear 8,000 tons, unless otherwise provided in Individual Subdivision Special Instructions.
- Where the total tonnage of cars 80 feet or longer is so large that it is impossible to comply with Individual Subdivision Special Instructions, the train consist must instead be so arranged that all cars less than 80 feet are handled in the required rear tonnage, thus placing all long-car to short-car couplings in the safe tonnage area.
- In applying these limits, the following 80-foot or longer loaded cars must be regarded the same as an empty 80-foot or longer car:
- Cars weighing less than 50 tons, gross weight
- Flat cars with one loaded trailer
- Flat cars with empty trailers
- Flat cars with either loaded or empty containers
- Locations where other restrictions are in effect are listed under individual subdivisions.
- 5. Remote Control Equipment (RCE-1) Operation—**
- Locomotives not equipped with alignment control couplers or bolster stops (see Item 2) must not be operated in RCE-1 consists.

Locomotive units in RCE-1 operations which will be coupled to cars, must be equipped with alignment control couplers.

Master and remote consists in RCE-1 operation must be confined to the following classes of locomotives:

F-45, SD-40, SD-45, SDP-40, SDP-45, U-25C, U-30C
U-28C, U-33C

Exception—When necessary to operate other classes of locomotives in RCE-1 trains they must be confined to master consist only.

Unless otherwise provided in Individual Subdivision Special Instructions, remote controlled locomotives must be placed in train approximately two-thirds back from master consist by car count.

In all RCE-1 trains, the number of master consist powered axles must equal or exceed the number of remote consist powered axles, but in no case may the excess be greater than six powered axles. The master consist must have a minimum of twelve powered axles and a maximum of twenty-four powered axles. The remote consist must have a minimum of six powered axles and a maximum of twenty-four powered axles.

Axles of cars numbered RCC 101 through RCC 112 must not be counted in determining the axle count of the remote consist.

RCE-1 equipment must not be used in trains handling empty equipment 80 feet and longer unless Individual Subdivision Special Instructions or bulletin are in effect to indicate the safe buffer between remote consist and such cars for that subdivision.

5A. Manned Helper Operations—

Locomotives not equipped with alignment control couplers or bolster stops (see Item 2) must not be operated in manned helper consists, except single non-equipped locomotives may be operated between locomotives equipped with alignment control couplers or bolster stops. Locomotive units, including trailing unit of head end consists, in manned helper operation, which will be coupled to cars must be equipped with alignment control couplers.

Where cars listed in first sentence of Item 4, All Subdivisions Special Instructions, are handled at rear of train, manned helper must be cut in ahead of such cars.

Unless otherwise provided in Individual Subdivision Special Instructions:

Helpers of twelve powered axles or less, may be operated at rear of train, ahead of or behind caboose, but must not be used on rear of trains handling empty equipment 80 feet and longer unless Individual Subdivision Special Instructions or bulletin are in effect to indicate the safe buffer between such cars and rear end helper for that subdivision.

Helpers will not exceed twenty-four powered axles. Head end consists in helper trains will not exceed twenty-four powered axles, except unit trains consisting entirely of Grade E steel couplers may have head end power up to thirty-six powered axles.

Helpers of more than twelve powered axles must be cut into train. Dispatcher will advise conductor of tonnage rating of helper so that conductor can determine proper location in train, arranging that tonnage trailing the helper approximately equals combined tonnage rating of helper locomotives.

Helper may be cut in ahead of less than its tonnage rating if restrictions for helper at rear of train regarding buffer for empty 80 feet and longer cars are observed.

Exceptions to Item 5A—Helpers of six powered axles or less are not restricted by any of the provisions of this item.

Helpers up to twenty-four powered axles may shove on rear of trains consisting entirely of Grade E steel couplers.

6. Repeater Relay Car Operation—

When repeater relay air car is to be operated in train, it must be placed approximately in the middle of the train.

7. Instructions for Safety Inspection—

Each car placed in train, where personnel are not on duty for the primary purpose of inspecting freight cars, may be moved after receiving safety inspection in accordance with the following standards:

1. A freight car with any defect that makes it unsafe for movement shall be corrected or set out of train.

2. No part of the freight car, nor anything attached to the car, may be hanging low enough to foul a road crossing or track structure.
3. Open top loads, including trailers and containers on flat cars, must be safely loaded.
4. Where width or height appears close to clearance lines, it must be known that the movement has been cleared with the proper authority.
5. Freight cars carrying bad order tags, that are safe for movement, may be taken in train to the point where repairs are to be made.

8. Handling of Hazardous Material—

When derailment, collision, fire or unforeseen occurrence takes place involving hazardous materials (such as explosives, flammable liquids, flammable compressed gases, radioactive or fissionable materials, poisons, poison gases or any other commodity which might be hazardous when involved in fire, released or leaking from their packages, containers or tank cars) conductor or member of the crew must check the waybills to determine what materials are involved.

If in doubt about the commodity or it is not described for a placarded car, the shippers' and consignees' names and addresses should also be noted.

A list must be made of the commodities involved with shipping names and classifications along with any emergency phone numbers, radioing or telephoning by quickest means possible to chief dispatcher and be governed by his instructions. This information must be available to any emergency agencies responding only if necessary for them to handle the situation safely.

When hazardous material is involved, crew members must keep out of the danger area and guard against people entering the area until controlled by civil agencies.

FRA Emergency Order No. 5 issued October 27, 1974 requires that DOT specification 112A and 114A tank cars, not equipped with FRA approved head shields transporting *flammable compressed gases*, must not be cut off while in motion and no car moving under its own momentum shall be allowed to strike these cars. Such cars must not be coupled to with more force than is necessary to complete the coupling.

Shipping papers must carry the notation "DOT 112A (or DOT 114A) must be handled in accordance with FRA E.O. No. 5." Employees must be informed of the presence of these cars and instructed to handle them in accordance with the requirements of this order. All switch lists and train lists must be plainly marked to indicate when cars are loaded with *flammable compressed gas*.

9. Storage of Cars Within Yard Limits Non-ABS Territory—

Within yard limits in non-ABS territory, the main track must not be used as a storage track except in case of emergency. When it becomes necessary to leave cars on main track in such territory, they must be protected by train order. This does not modify the requirement to move at reduced speed as required in Rule 93.

10. Use of Radios—

If radios are provided, a voice test of the radio in the control unit and caboose must be made to determine if the radio is working properly before a train leaves its starting point.

If radio is working properly, it must be turned on during entire trip with volume adjusted so calls may be received. Defective radio equipment must be reported to the Chief Dispatcher at first point of communication. The conductor and engineer will be equally responsible to see that these instructions are complied with.

11. Train Inspection and Failed Equipment Detector Instructions—

When blowing snow or other conditions restrict visibility to the point that proper running inspection cannot be made, or when notified that a hot box detector is out of service, freight trains will reduce speed to the extent required, stopping if necessary, to make train inspection. Conductors will determine frequency of such inspection, dependent on visibility conditions, avoiding unnecessary delay to trains.

Employees should be alert for insulating commodities such as clay, chips, oil, etc., getting on top of rails. This condition could possibly insulate the track, and cause loss of train shunt. Such conditions should be promptly reported and trains protected per rules while in CTC and ABS territory.

When a hot box detector is out of service, the requirements of Operating Rules or instructions will be suspended for defective equipment indicator associated with such hot box detector.

Failed Equipment Detector Instructions—

This device must be observed by the crew on rear of train, and they must be governed by the information shown immediately after the rear of the train has passed.

Enginemen must alert crew members on rear of train when approaching detector site. Train must not move beyond failed equipment sign until authorization to proceed is received from rear of train.

When failed equipment is indicated engine crew must be notified to stop train for inspection. Advise Dispatcher reason for delay by first available means of communication.

DEFECTIVE EQUIPMENT DISPLAY

AS VIEWED FROM APPROACHING TRAIN

Note: 1—Hot bearing indicator light. When illuminated hot bearing detected. The hot bearing is located on right side of train when right light is illuminated, and on left side when left light is illuminated. Stop and inspect train.

Note: 2—Multiple hot bearing or dragging equipment indicator light. When illuminated inspect train for more than one hot bearing or dragging equipment.

Note: 3—Dragging equipment indicator light. When illuminated dragging equipment has been detected. Stop and inspect train as indicated. Advise dispatcher reason for delay by first available means of communication.

Note: 4—Flashing train inspection indicator light. When illuminated train is being checked for hot bearing and dragging equipment. If this light is not illuminated, stop and inspect train.

Note: 5—Journal number display panel. Number shown is axle count from rear of train to first hot bearing or dragging equipment detected. When making inspection, check at least four (4) axles both directions from indicated number.

All journals on the train must be inspected whenever hot bearing indicator light, dragging equipment indicator light, multiple hot bearing or dragging equipment indicator light is illuminated and there is no count shown on defective equipment display panel or when digital readout displays false indication such as numbers totaling more than train axle count.

FAILED EQUIPMENT SIGN

Failed (F.E.) signs are located 13,500 feet beyond the defective equipment detector site.

12. Spring Switches—

Instructions for operation of spring switches are posted at or near the spring switch and must be complied with. Spring switches are identified by yellow sign with black letter "S" located on or near spring switch.

All spring switches are equipped with facing point locks except when identified as not having a facing point lock in the Subdivision Special Instructions.

13. Railroad Crossings at Grade—

At a railroad crossing at grade protected by signals, trains, engines or cars must not be left standing between opposing absolute signals unless coupled to other equipment that extends beyond one of the absolute signals.

At automatic interlockings, in addition to complying with Rule 613, employees must be governed by instructions posted.

14. Rules Changes and Modifications—

Rule 34 as contained in the Consolidated Code of Operating Rules is amended as follows:

Employees located in the cab of engine must communicate to each other in an audible and clear manner the name or aspect of each signal affecting movement of their train or engine, as soon as the signal is clearly visible or audible. It is the responsibility of the engineer to have each employee comply with these requirements, including himself.

It is the engineer's responsibility to have each employee located in the cab of engine maintain a vigilant lookout for signals and conditions along the track which affect the movement of the engine or train.

If a crew member becomes aware that the engineer has become incapacitated or should the engineer fail to operate or control the engine or train in accordance with the signal indications or other conditions requiring speed to be reduced, other members of the crew must communicate with the crew member controlling the movement at once, and if he fails to properly control the speed of the train or engine, other members of the crew must take action necessary to ensure the safety of the train or engine, including operating the emergency valve.

Rules 200 and 83(B) and other rules pertaining to authority for, and signatures on, train orders and clearances are modified to permit train orders and clearances to be issued by authority and over signature of the Chief Dispatcher.

Train orders and clearances for the First through the Tenth Subdivisions of the Alliance Division and from Hastings to Kene-saw of the Fourth Subdivision of Lincoln Division will be issued by the authority and over the signature of the Chief Dispatcher at McCook.

Train orders and clearances for Eleventh, Twelfth, Thirteenth, Fourteenth, Fifteenth, Sixteenth, Seventeenth, Eighteenth and Nineteenth Subdivisions of the Alliance Division will be issued by the authority and over the signature of the Chief Dispatcher at Alliance.

Train orders and clearances for the Eighteenth, Nineteenth, Twentieth, Twenty-Seventh and Twenty-Eighth Subdivisions of Lincoln Division will be issued by the authority and over the signature of the Chief Dispatcher at McCook.

Rule 103(E) as contained in the Consolidated Code does not apply on Burlington Northern, the following rule applies:

Consolidated Code Rule 103(C) is modified to read as follows:

Cars on any track must be left clear of crossing so as to not actuate crossing signals, and a clear passageway must be left to the station. When necessary to spot cars in the vicinity of public or private crossings, they must, if practicable, be left not less than 200 feet from crossing. When it can be avoided, engines must not stand within 200 feet of public crossings.

103(E): Cars must not be handled ahead of the engine between stations outside of yard limits except when necessary to take cars to or from a spur track, or in work train service, or when it is necessary for a train to make a back-up movement. Such movements must be for no greater distance than necessary, and air brakes on such cars must be cut in and operative.

The second, third and fourth paragraphs of Consolidated Code

Rule M, and the entire BN Safety Rule 94, referring to employees being on the roofs of cars are cancelled.

The following rule applies to all employees:

Train, engine and yard service employees must not occupy the roof of a freight car or caboose under any circumstances. Other employees whose duties require them to occupy the roof of a freight car or caboose may do so only when equipment is standing.

BN Safety Rule 144 is cancelled and new Safety Rules 144(A) and 144(B) are in effect and read as follows:

144(A): When air hoses are uncoupled on passenger equipment, engines, or when uncoupling air hoses from yard air supply:

- a) Have both angle cocks closed. When disconnecting yard air line, valve must be closed.
- b) Take firm grip on hose coupling and apply upward pressure.
- c) Break connection gradually to release pressure in hose.
- d) Turn face away from air hose connection as pressure is released.
- e) When practicable, keep one foot outside of rail.

144(B): When air hoses uncoupled on freight cars by trainmen and yardmen:

- a) Have both angle cocks closed.
- b) Operate uncoupling lever and signal for movement.
- c) Allow air hoses to part by themselves, keeping all parts of body fully in the clear.

In CTC territory, before using any electrically locked switch, permission must be obtained from control operator. Rule 281 is amended accordingly.

Consolidated Code of Operating Rule No. 729 has been changed to read as follows:

Employees must familiarize themselves with the Department of Transportation regulations governing the handling and transportation of explosives and flammables, and be governed thereby. When handling cars containing explosives or flammables, it must be known that they are in proper place in the train.

Burlington Northern Air Brake and Train Handling Rules Form 15338 are in effect. Employees whose duties are in any way affected by these rules must have a copy of this book available while on duty.

15. Flat Spots on Wheels of Passenger Trains or Engines—

Should flat spots on wheels develop on passenger train cars or any engine, conductor or engineer will immediately advise Chief Dispatcher and be governed by his instructions.

16. Burlington Northern Signal Aspects and Indications as contained in pamphlet Form 15307 dated January 1, 1976 is in effect.

Special signal aspects as shown for Burlington Lines on pages 118, 119, 120 and 121 of the Consolidated Code of Operating Rules remain in effect.

17. Roadway signs indicate maximum speed for passenger trains. A triangle type sign with reflex letter Z indicates zone territory where maximum speed is indicated by numerals thereon, and will govern until next zone sign is reached. Where speed restrictions are required on curves within a zone, banjo type sign with reflex letter C and numerals thereon will indicate maximum speed for that particular curve, after which zone speed may be resumed. Unless otherwise specified by timetable, bulletin, or special instructions these signs will be located one mile from point where zone speed changes or from point of curve.

18. A third set of train orders will be furnished the rear flagman on all passenger trains.

2. Bridge, Engine and Heavy Car Restrictions—
Cars heavier than the following not permitted without authority of Superintendent:
40 feet or less in length. 220,000 lbs.
Over 40 feet long. 263,000 lbs.
SD-24, SD-45, U25C, U28C, GP-40, SD-40, U30C and U33C engines must not operate on following tracks:
Hamburg—North elevator.
St. Joseph—Trains and engines handling wide and low cars loaded with airplane parts and similar lading, must not operate through passenger depot tracks 1 and 2 account will not clear high platforms.
Omaha—Freight trains and movements handling piggybacks must not use depot tracks 2 and 3.
Bridge derrick 975501 may operate on tracks 5 and 6, and must keep off all other tracks adjacent to station canopies.
 3. Train Register Exceptions—
Napier, Bigelow, Corning—Trains will register when directed by train order. Bigelow train register located in telephone box MP 101.83. Corning train register west wye switch.
Pacific Jct.—Trains in through movement will register by register ticket.
 4. Clearance Provisions and Exceptions Rule 83(B)—
Napier—Rule 83(B) does not apply to eastward trains off Eighth Subdivision.
Pacific Jct.—Trains must receive clearance.
Omaha—Rule 83(B) does not apply.
 5. Hamburg—
Westward trains use siding east of depot; eastward trains use siding west of depot, unless otherwise provided.
Stop and protect switching movement over E Street.

6. Pacific Jct.—The time of trains, via Bartlett, applies at the south-east wye track switch. Normal position of southeast wye track switch is for the wye.

7. Council Bluffs Yard—Switching movements within the interlocking limits at CMStP&P-CRI&P crossings MP 491.75, Council Bluffs yard, may be made on permission from the control operator. Engine must follow each of the last six cars switched out of the interlocking limits. When stop signal governing movement over the crossing on BN main track fails to clear, Rules 606 and 269 must be complied with. Interlocking rules in effect for movements over crossing on BN yard lead.

When stop signal fails to clear for main track movement over N&W crossing, MP 491.31; C&NW crossing, MP 492.70; IC crossing, MP 492.99; or CRI&P crossing, MP 493.01, CTC rules must be complied with and, in addition, movement over crossing must be made under protection.

N&W crossing over freight track all movements must stop and be governed by signal indication.

8. Omaha—Union Pacific crossing between junction with Union Pacific and Sixth Street, is protected by electrically locked gate, normally lined and locked for BN train movements.

9. Manual interlockings not indicated at station between St. Joseph and waterworks:

St. Joseph Term. Ry MP 61.51

Lincoln—GP-38 class engines Nos. 2072 through 2077, must not use passenger yard tracks Nos. 3, 4 and 5.

Omaha—Bridge derrick 975501 may operate on tracks 5 and 6 only and must keep off all other tracks adjacent to station canopies.

Trains handling piggybacks and freight trains must not use depot tracks 2 and 3.

3. Train Register Exceptions—

Pacific Jct.—Trains in through movement will register by register ticket.

4. Clearance Provisions and Exceptions Rule 83(B)—

Omaha—Rule 83(B) does not apply to westward trains off First Subdivision.

At intermediate locations in CTC territory Rule 83(B) will not apply when so authorized by train dispatcher.

5. Between Pacific Jct. and Plattsmouth—

Between MP 3.5 and MP 4.5, when starting a freight train, minimum throttle position will be maintained to keep the speed slow and uniform until engine passes MP 3.5 eastbound and MP 4.5 westbound.

6. Omaha—

Union Pacific crossing between junction with Union Pacific and Sixth Street, is protected by electrically locked gate, normally lined and locked for BN train movements.

Interlocking at Fifth and Howard Streets is automatic. Approach clearing sections are 500 feet in length and when occupied will cause signal to display a proceed aspect if no conflicting movements are being made. If movement approaching a clear signal aspect is delayed, signal may display a stop aspect after expiration of pre-determined time. Electrically locked derails on auxiliary tracks may be removed when movement has occupied short track circuit in advance of derail after switch padlock has been removed and indicator light displays. Derails must be restored and locked immediately after movement has cleared the derail. Push buttons on signals clear signal to make reverse movement or a forward movement after making reverse movement.

7. South Omaha—

When westward trains enter South Omaha yard by signal indication through dual controlled switch at MP 19.78, such indication will convey control operator's permission to enter controlled siding through spring switch at MP 20.29. Trains stopped or delayed in making this movement must receive permission from control operator before entering or fouling controlled siding. If conditions require, westward train will be stopped and notified by control operator before entering yard at MP 19.78.

8. Lincoln—

Interlocking at Missouri Pacific crossing MP 58.87 is manually controlled. Eastward signals are part of Centralized Traffic Control

system. Westward signals are interlocked and are part of Baird interlocking.

Centralized Traffic Control in effect on both freight tracks between Baird interlocking limits and Hall interlocking limits.

9. Automatic Interlockings not Indicated at Station—

C&NW crossing 2.7 miles west of Havelock.

10. Manual Interlockings not Indicated at Station—

Missouri Pacific crossing 4.2 miles west of Havelock.

11. Handling 80-Foot or Longer Cars—

(See Handling 80-Foot or Longer Cars, All Subdivisions.)

Between Plattsmouth and Pacific Jct.—

Trains of 4800 or greater trailing tons must handle empty cars, 80 feet and longer, in the rear 4800 tons.

Trains of greater than 7400 trailing tons must handle loaded cars, 80 feet and longer, in the rear 7400 tons, except 80 feet and longer cars in excess of 100 gross tons will have no restriction on location in train.

Certain loaded cars, 80 feet and longer, must be regarded the same as an empty car. (See Item 4, All Subdivisions.)

Cars 80 feet and longer with one loaded trailer may be treated the same as a two-trailer load, provided such car is coupled on each end to an 80-foot or longer car.
